This multi-area team planned, designed, and executed the replacement of the entire plumbing system of the 98 year old, President's house. Due to the sensitive nature of this project, the team members were selected based on their unique skillset and professionalism and were from across FCS including: Project management; FM EN Zone, SCL Zone, Ops; FM Administration; FM procurement. The plumbing system consisted of copper, galvanized, and brass piping from several renovations over the years with serious corrosion, causing poor water quality and periodic leaks. The project was completed ahead of schedule and under budget even with the many challenges it faced. The team worked effectively to show our president and campus leaders firsthand how our diverse talents can come together. Nice job!

The President's house, re-plumbing team was nominated
by Darrell Reynolds.
The award was "virtually" presented by Rick Burgess.
