GLOSSARY

 Primary: Central Plant Usage
 MMBtu: Million Btu

NOTES

- Information provided is for Ithaca central utility campus only.
- Kyoto Base Year is 1990
- Cornell Combined Heat and Power Project (CCHPP) expected start-up FY 2010. Cornell Utilities Department will generate the majority of Ithaca Campus electrical demand utilizing natural gas turbines. Waste heat from the gas turbines will be used by a heat recovery steam generator to provide steam to Campus. Coal use will decline and natural gas usage will increase as a result of the CCHPP.
- 1990 grid purchased electric emission rate determined from New York State Electric & Gas (NYSEG) 1990 annual report.
- Beginning FY 2006, grid purchased electric emission rate determined from State average rates provided by New York State Public Service Commission (NYSPPSC). This rate better reflects electricity dispatch in the current deregulated environment.
- Chilled water input Btu's are the energy input to the central plants for production and distribution of cooling water.
