2015 KEYSTONE AWARD

eBUILDER EXECUTIVE COMMITTEE

This eBuilder team has worked tirelessly for the past two years to customize and develop a system that will change how IPP does business. Their efforts in the selection, purchase, testing, and implementation of the electronic system is to be applauded. This team has identified the core requirements needed for its success. Each member of this team has brought their own expertise and dedication to this project. It has a launch date that is approaching very quickly. This project management system is a smart schedule and cost management tool that will improve communications about projects all over campus. This document control system tracks every step in a project from development of a Project Approval Request (PAR) through bid management, contracting, and project execution. This automated system will reduce the time required to process documents and execute projects. As a comprehensive construction project management tool, its dashboard ability and reporting tools have the ability to quickly check the status of outstanding action items and produce detailed, comprehensive reports. It allows complete visibility of the project and its progress. This is a vital tool that will increase accountability, efficiencies, and the effective execution of projects across the Cornell campus. This core team has been piloting this system, testing client’s needs, user needs, and executive needs. They are mapping out and providing trainings for users. This team’s success has been no small task and it has encompassed the coordination of varying groups within IPP and the University to ensure its success.

This team was nominated by Jeanne Boodley-Buchanan
