

Work Type	Definition / Examples
AD - Administration	For recording vacation time, sick time, and for meetings.
CA - Calibration	Setting or correcting of a measuring device.
CM - Corrective Maintenance	Work performed to correct a fault in equipment or a facility that results in restoration to its intended condition.
EM - Emergency Maintenance Work	Corrective maintenance work performed to correct a fault that could cause a critical infrastructure to be inoperable, life safety issues, or harm to research.
ES - Estimating	Estimate of labor and material costs.
EV - Event Report	For logging data or readings (history log).
GS - General Services	Service work not focused on correcting or preventing a fault on equipment or a facility. Examples are painting, moving tables & chairs, hanging items, installations, building walls, moving a lab, etc.
IN - Inspection Work	Includes testing (for example, backflow preventers, emergency lights, verify sheet metal according to standards).
PD - Predictive Maintenance	Activities performed based on process data aimed at the avoidance of maintenance problems by prediction of likely failure modes to prevent failures and/or extend the useful life or reliability of equipment or a facility.
PM - Preventive Maintenance	Activities performed based on a run time, or time interval basis, to prevent failures and/or extend the useful life or reliability of equipment or a facility.
PW - Project Work	Work that is not CM, PM, or PD, is planned, and takes more than 8 hours to complete. Only for WOs that fall under a Project SR.
TR - Training	Staff training & development.
